

## 50 Java Array Problems (NO DSA, Easy → Advanced)

1. Print all elements of an array.
2. Find the sum of all elements in an array.
3. Find the average of array elements.
4. Find the maximum value in an array.
5. Find the minimum value in an array.
6. Count how many times a value appears in an array.
7. Check whether an element exists in an array.
8. Reverse an array manually.
9. Copy one array into another.
10. Find the index of a given element.
11. Count even numbers in an array.
12. Count odd numbers in an array.
13. Replace all negative numbers with 0.
14. Replace all zeros with 1.
15. Multiply every element by 2.
16. Convert an int array to a String.
17. Find the first even number in an array.
18. Find the first odd number in an array.
19. Check if an array is sorted ascending.
20. Check if an array is sorted descending.
21. Rotate an array left by 1 position.
22. Rotate an array right by 1 position.
23. Count positive numbers in an array.
24. Count negative numbers in an array.
25. Find the difference between max and min.

26. Remove duplicates (without using collections).
27. Merge two arrays into one (simple merge).
28. Compare two arrays to check if they are equal.
29. Find how many elements are greater than a given number.
30. Find how many elements are smaller than a given number.
31. Replace each element with its square.
32. Remove a specific element (value-based remove).
33. Insert an element at a given index.
34. Swap first and last element.
35. Count elements greater than the average.
36. Find the largest odd number.
37. Find the smallest even number.
38. Split an array into two halves.
39. Join two arrays into one long string.
40. Check if array contains two identical consecutive numbers.
41. Print array in reverse order without modifying it.
42. Shift all zeros to the end (simple method).
43. Separate even and odd numbers into two arrays.
44. Count how many elements are between two values (range count).
45. Print unique elements only (simple logic).
46. Replace elements at even index with 100.
47. Replace elements at odd index with 200.
48. Convert a char array to uppercase.
49. Convert a char array to lowercase.
50. Convert a 2D array into a 1D array (simple flatten).
